2.0 Strategies for weather related contingencies

2. Drought
2.1 Drought (Rainfed situation)
Drought-Pre-Monsoon (Last week of March to First week of April) Normal

Condition				Suggested Contingency measures	
Early season drought (delayed onset)	Major Farming situation	Normal Crop / Cropping system	Change in crop /cropping system including variety	Agronomic measures	Remarks on Implementation
Delay by 2 weeks (2 nd to 3 rd week of April)	Moderately steep sloping hills with very deep fine soils	Jhum paddy	No change Short duration vars. Ranjit, CAU-R-1, TTB-404	 Higher seed rate application Foliar spray of 2% urea Weeding is to be done at regular interval. 	Schemes from line departments RKVY/ATMA
		Maize	No change Short duration crops/varieties like RCM-1-75, RCM-1-76 Maize + soya bean/rice bean inter cropping	 Conservation of pre-monsoon soil moisture through soil/straw/grass mulching practices Hydropriming/ seed soaking in water for 24hr and followed by shade drying before sowing. Application of organic manure before sowing. 	Schemes from line departments RKVY/ATMA
		Millet	No change Short duration crops/varieties of finger millet (VR-708, GPU-67), foxtail millet (SR-16, Meera)		Schemes from line departments RKVY/ATMA
		Vegetables crops	No change Kashi Anmol, Arka Lohit, Kashi Early, IIHR -Sel. 132	 Cole Crops Use short duration varieties. Use of organic manures (FYM 5 tones/ha or vermicompost 1 ton/ha) Raise crop on ridge-furrow or raised bed planting system Conservation of soil moisture through 	Schemes from line departments RKVY/ATMA

slopir	steep to steep ng hills with ow loamy soils	No change Short duration vars. Ranjit, CAU-R-1, TTB-404	soil/straw/grass mulching practices. Chilli Raise crop on ridge-furrow raised bed planting system Use of organic manures (FYM 5 tones/ha or vermicompost 1 ton/ha) to enhance water holding capacity of soil Conservation of soil moisture through soil/straw/grass mulching practices. Do not allow weeds to grow during plant's early growth stage. Mixed cropping of various vegetable crops. Foliar spray of 2% urea Higher seed rate application Weeding is to be done at regular interval.
	Maize	No change Short duration crops/varieties like RCM-1-75, RCM-1-76 Maize + groundnut/soy a bean/rice bean inter cropping.	 Conservation of pre-monsoon soil moisture through soil/straw/grass mulching practices Hydropriming/ seed soaking in water for 24hr and followed by shade drying before sowing. Application of organic manure before sowing.
	Millet	Short duration crops/varieties of finger millet (VR-708, GPU- 67), foxtail millet (SR-16, Meera)	

2.1.2 <u>Drought-irrigated situation</u>: NA in this district <u>Drought Normal onset of monsoon (1st week of june) Normal</u>

Condition			Suggested	Suggested Contingency measures			
Early season drought (Normal onset)	Major Farming situation	Normal Crop/croppin g system	Crop management	Soil nutrient & moisture conservation measures	Remarks on Implementation		
Delay by 2 weeks (3 rd week of June)	Moderately steep sloping hills with very deep fine soils	Jhum paddy	No change Short duration vars. Ranjit, CAU-R-1, TTB-404	 Higher seed rate application Foliar spray of 2% urea Weeding is to be done at regular interval. 	Schemes from line departments RKVY/ATMA		
		Maize	No change Short duration crops/varieties like RCM-1-75, RCM-1-76 Maize + groundnut/soya bean/rice bean inter cropping	 Conservation of pre-monsoon soil moisture through soil/straw/grass mulching practices Hydropriming/ seed soaking in water for 24hr and followed by shade drying before sowing. Application of organic manure before sowing. 	Schemes from line departments RKVY/ATMA		
		Millet	No change Short duration crops/varieties of finger millet (VR-708, GPU-67), foxtail millet (SR-16, Meera)	■ 10% higher seed rate			
		Vegetables crops	No change Use short duration varieties. Kashi Anmol, Arka Lohit, Kashi Early, IIHR -Sel. 132	 Cole Crops Use of organic manures (FYM 5 tones/ha or vermicompost 1 ton/ha) Raise crop on ridge-furrow or raised bed planting system Conservation of soil moisture through soil/straw/grass mulching practices. Chilli Raise crop on ridge-furrow raised bed planting system Use of organic manures (FYM 5 tones/ha or vermicompost 1 ton/ha) to enhance water holding capacity of soil 			

			 Conservation of soil moisture through soil/straw/grass mulching practices. Do not allow weeds to grow during plant's early growth stage. Mixed cropping of various vegetable crops.
Very steep to steep sloping hills with shallow loamy soils	Jhum paddy	No change Short duration vars. Ranjit, CAU-R-1, TTB-404	 Foliar spray of 2% urea Higher seed rate application Weeding is to be done at regular interval.
	Maize	No change Short duration crops/varieties like RCM-1-75, RCM-1-76 Maize + groundnut/soya bean/rice bean inter cropping.	 Conservation of pre-monsoon soil moisture through soil/straw/grass mulching practices Hydropriming/ seed soaking in water for 24hr and followed by shade drying before sowing. Application of organic manure before sowing.
	Millet	Short duration crops/varieties of finger millet (VR-708, GPU-67), foxtail millet (SR-16, Meera)	

Normal onset of pre- monsoon

Condition			Suggested	Contingency measures	
Early season drought	Major Farming	Normal	Crop management	Soil nutrient & moisture	Remarks on
(Normal onset)	situation	Crop/croppin		conservation measures	Implementation
		g system			
Normal onset followed by 15-20 days dry spell after sowing leading to poor germination/crop stand etc.	Moderately steep sloping hills with very deep fine soils	Jhum paddy	 Weeding to be doen at regular interval Application of organic manure whenever possible Gap filling to be done to maintain optimum plant density Foliar application of 1% MOP 	 Provide irrigation from the available sources Mulching with locally available material 	Schemes from Line Deptt. /RKVY/ATMA
		Maize	■ If the germination is less than 30% of optimum plant population, re sowing	 Provide irrigation from the available sources 	Schemes from

	Millet (finger/foxtail millet)	should be done Gap filling to be done to maintain optimum plant density Foliar application of 1% MOP If the germination is less than 30% of optimum plant population re sowing should be done Gap filling to be done to maintain optimum plant density	 Mulching with locally available material Provide irrigation from the available sources Mulching with locally available material 	Line Deptt. /RKVY/ATMA
	Vegetable crops (Cole, Chilli, beans, okra, brinjal)	 Foliar application of 1% MOP Gap filling with available seedlings. Foliar application of 1% MOP 	 Provide irrigation from the available sources Prefer Drip/sprinkler irrigation Mulching with locally available material 	Protected cultivation to be promoted
Very steep to steep sloping hills with shallow loamy soils	Jhum Paddy	 Weeding to be doen at regular interval Application of organic manure whenever possible Gap filling to be done to maintain optimum plant density Foliar application of 1% MOP 	 Provide irrigation from the available sources Mulching with locally available material 	Schemes from Line Deptt. /RKVY/ATMA
	Maize	 If the germination is less than 30% of optimum plant population, re sowing should be done Gap filling to be done to maintain optimum plant density Foliar application of 1% MOP 	 Provide irrigation from the available sources Mulching with locally available material 	Schemes from Line Deptt. /RKVY/ATMA
	Millet	 If the germination is less than 30% of optimum plant population re sowing should be done Gap filling to be done to maintain optimum plant density Foliar application of 1% MOP 	 Provide irrigation from the available sources Mulching with locally available material 	
	Vegetable	 Gap filling with available seedlings. Foliar application of 1% MOP 	 Provide irrigation from the available sources Prefer Drip/sprinkler irrigation Mulching with locally available material 	Protected cultivation to be promoted Promoted rain water harvesting structure

Condition			Sug	ggested Contingency measures	
Mid season drought (long dry spell, consecutive 2 weeks rainless (>2.5 mm)period)	Major Farming situation	Normal Crop /cropping system	Crop management	Soil nutrient & moisture conservation measures	Remarks on Implementation
Vegetative stage	Moderately steep sloping hills with very deep fine soils	Jhum paddy	 Weeding Application of organic manure Gap filling Foliar application of 1% MOP 	 Provide irrigation from the available sources Mulching with locally available material 	
		Maize	WeedingIntercultureFoliar application of 1% MOP	 Provide irrigation from the available sources Mulching with locally available material 	
		Millet (finger/foxtail millet)	WeedingIntercultureFoliar application of 1% MOP	 Provide irrigation from the available sources Mulching with locally available material 	
		Vegetable crops (Cole, Chilli, beans, okra, brinjal)		 Provide irrigation from the available sources Prefer Drip/sprinkler irrigation

2.1.2 Drought - Irrigated situation: NA

2.2 Unusual rains (untimely, unseasonal etc) (for both rainfed and irrigation situation)

Condition	-	Suggested contingence	cy measure	
Continuous high rainfall in a short span leading to water logging	Vegetative stage	Flowering stage	Crop maturity stage	Post harvest
paddy	Drainage of excess water from the field	Immediate provision of drainage system	 Drain out excess water Harvest at physiological maturity 	 Shifting to a safer place Dry in shade and in well ventilated space
Maize	Provide drainage	Provide drainage	Drain out excess waterHarvest at physiological maturity	Shifting to a safer placeDry in shade and in well ventilated space
Milllet	Drainage of excess water	Immediate provision of drainage system	Drain out excess waterHarvest at physiological maturity	Proper drying
Horticulture				
Orange	 Provide proper drainage In steep slopes, prepare half moon terraces to prevent soil erosion and leaching loss If there is physical damage, pruning of damage branches and application of Bordeaux paste should be done to prevent secondary infection. Proper nutrient management to be followed. 	 Provide proper drainage Foliar application of micronutrient/multiplex @ 0.2% should be done to prevent flower drop Control aphids and mealy bugs etc 	 If there is physical damage, pruning of damage branches and application of Bordeaux paste should be done to prevent secondary infection Harvesting can be delayed upto 60-75 days by spraying preharvest chemical i.e. 2-4D at 20ppm + GA at 10ppm + 0.2% Kcl on maturing fruits. Harvesting can be delayed. In citrus even after full maturity, the 	 Fruits are to be stored in well aerated farm shed or house to avoid loses. Storing at 8 – 10 0 C with 85 – 90 % RH is preferred.

			fruits can be left on the tree for 2-3 weeks without deterioration which facilitates prolong harvesting. While picking, the stem end should be cut close to the fruit without damaging the rind. Hence avoiding fungal infection. Collect the good fruits and store them. Damaged fallen fruits to be	
Apple	 Provide proper drainage In steep slopes, prepare half moon terraces to prevent soil erosion and leaching loss If there is physical damage, pruning of damage branches and application of Bordeaux paste should be done to prevent secondary infection Nutrient management to be done 	 Provide proper drainage Half moon terraces to be done to prevent nutrient loss Pruning of damaged brances and application of Bordeaux Paste to be done Nutrient management along with foliar application micronutrient to be done 	disposed off Spray 2,4,5-T @ 20ppm or 2,4,5-TCPA @ 15ppm to inhibit fruit drop Collect the good fruits and store them. Damaged fallen fruits to be separated and disposed off Necessary to maintain adequate drainage	 Stored the fruits for 4-8 months at -1.1 to 0°C and 85-90 % RH. Spray growth regulators Like Alar @ 1000 ppm to improve storability
Pineapple	 Make trenches/furrows in between ridges to facilitate drainage of excess water Remove the excess suckers to maintain the quality of plant Nutrient management to be followed 	• Application of Ethephon 2mg in 100-140mg, Bentoniteor NAA @ 25ppm or 2, 4-D @5-10 ppm should be applied for uniform flower induction.	 Provide proper drainage Spraying of insecticides and fungicide Fruits can be protected with locally available material to protect the mature fruit from unusual rains 	 Store fruits in well aerated farm shed or house to avoid loses. Pineapples can be stored at a temperature of 7.5-12°C and RH 70-90% for 4 weeks.
Kiwifruit	 Provide proper drainage In steep slopes, prepare half moon terraces to prevent soil erosion and leaching loss If there is physical damage, pruning of damage branches and application of Bordeaux paste should be done to prevent secondary infection Nutrient management to be done 	 Provide proper drainage Half moon terraces to be done to prevent nutrient loss Pruning of damaged branches and application of Bordeaux Paste to be done Nutrient management along with foliar application micronutrient to be done 	 Heavy pruning should not done as the fruit will be affected by rain Drain out excess water 	 Stored the fruits at 0 to 4°C and 80-90 % RH. Spray growth regulators Like Alar @ 1000 ppm to improve storability
Banana	 Provide proper drainage Nutrient management to be done Propping or staking should be done Spraying of insecticides and fungicide 	 Provide proper drainage Nutrient management to be done along with application of micronutrient 	 Provide proper drainage Nutrient management to be done Propping to be done Bagging to be done to protect the 	 Store the fruits/ bunch in well aerated farm shed or house to avoid loses. Storing at 10 – 12° C

		 Propping or staking should be done Spraying of insecticides and fungicide 	bunch from unusual rains. Denavelling to be done to improve the bunch weight (removal of male bud)	with 70 – 80 % RH
Large cardamom	 It grows luxuriantly in moist and humid climate. So continuous rain is not a problem during its vegetative growth. Provide adequate drainage Spraying of insecticides and fungicide 	 Rain during flowering is detrimental. So water logging should be avoided. Proper drainage system should be followed. Shade regulation may be taken up providing 50-60% shade. 	 Harvesting can be delayed Proper drainage system should be followed. 	■ Collect and dry the produce in fuel kiln overnight at 50°-60°C or in drier for 14-18 hours at 45°-50°C
Ginger	 Provide proper drainage channels to avoid stagnation of water Earthing up to be done at proper soil moisture level Nutrient management to be followed Field bunding to prevent entry of water from surrounding areas. Spraying of insecticides and fungicide 	 Provision of drainage to remove excess water. Earthing up should be followed by manuring. Field bunding to prevent entry of water from surrounding areas. 	Dry weather before harvesting is necessary. So harvesting can be delayed.	 Shifting of the produce to a drier place. Drying to remove excess moisture of produce.
Turmeric	 Provide proper drainage channels to avoid stagnation of water Earthing up to be done at proper soil moisture level Nutrient management to be followed Field bunding to prevent entry of water from surrounding areas. Spraying of insecticides and fungicide 	 Provision of drainage to remove excess water. Earthing up should be followed by manuring. Field bunding to prevent entry of water from surrounding areas. 	Dry weather before harvesting is necessary. So harvesting can be delayed.	 Shifting of the produce to a drier place. Drying to remove excess moisture of produce.
Vegetables (cucurbits)	 Provision of drainage to remove excess water. Earthing up to be done at proper soil moisture condition followed by manuring Field bunding to prevent entry of water from surrounding areas. Staking should be properly followed. Rainy season crops can be trained on a 	 Spray maleic hydrazine (MH) and 2, 4-5 tri-iodobenzoic acid (TIBA) @ 50ppm for Sex expression. Boron @ 3ppm and calcium @ 20ppm is also effective. Provision of drainage to remove excess water. Earthing up followed by manuring 	 Fruits to be harvested immediately without causing injury to fruits Remove all damaged fruit Take up appropriate plant protection measures 	■ The fruits can be stored for 2-3 weeks at 15- 20°C and RH 75% in a well-ventilated chamber

	bower made of bamboos and sticks.	 Field bunding to prevent entry of water from surrounding areas. Take up proper plant protection measures 		
Heavy rainfall w	ith high speed winds in a short span			
Horticulture				
Orange	 Earthing up of young plants to avoid uprooting due to wind. Provide proper drainage facilities. Staking to avoid falling off of plants In steep slopes, prepare half moon terraces to prevent soil erosion and leaching loss Pruning of damage branches and application of Bordeaux paste should be done to prevent secondary infection Proper nutrient management to be followed 	 Wind break around the orchard to protect crop from wind damage Provide proper drainage Nutrient management to be followed along with foliar spray of micronutrient Pruning of damage branches and application of Bordeaux paste should be done to prevent secondary infection 	 Propping heavy bearing tree and weak tree by bamboo pole. Harvesting can be delayed upto 60-75 days by spraying preharvest chemical i.e. 2-4D at 20ppm + GA at 10ppm + 0.2% Kcl on maturing fruits. Pruning of damage branches and application of Bordeaux paste should be done to prevent secondary infection 	 Fruits are to be stored in well aerated farm shed or house to avoid loses. Pack the fruit in perforated polythene bag, boxes, crates, etc. and store at temperature of 10-11°C & 92 % RH.
Apple	 Earthing up of young plants to avoid uprooting due to wind. Provide proper drainage facilities. Staking to be done to avoid falling off of plants. In steep slopes, prepare half moon terraces to prevent soil erosion and leaching loss Pruning of damage branches and application of Bordeaux paste should be done to prevent secondary infection Proper nutrient management to be followed 	 Provision of drainage to remove excess water. Wind break around the orchard Maintain the half moon terraces to avoid soil nutrient loss Proper nutrient management to be followed along with foliar application of micronutrient Prune out all damage branches with appropriate plant protection measures 	 Harvest ripe fruits Propping heavy bearing tree and weak tree by bamboo pole. Use of plant bio-regulators to delay ripening with Daminozide or Alar @ 1000ppm sprayed before 60 days before harvest. 	Store fruits for 4-8 months at -1.1 to 0°C and 85-90 % RH.
Pineapple	 Earthing up plants for better development and anchorage. Make trenches/furrows in between ridges to facilitate drainage of excess water. Nutrient management to be followed 	 Earthing up to prevent uprooting. Provide proper drainage Nutrient management to be followed Spray NAA @ 25ppm or 2, 4- 	 Fruits can be protected with locally available material to protect the mature fruit from unusual rains Spraying of insecticides and fungicide 	 Store fruits in well aerated farm shed or house to avoid loses. Pineapples can be stored at a temperature of 7.5-12°C and RH 70-90%

		D @ 5-10 ppm should be applied for uniform flower induction.	 Earthing up plants for better development and anchorage. Make trenches/furrows in between ridges to facilitate drainage of excess water 	for 4 weeks.
Kiwifruit	 Provide proper drainage Support the plant using T-Bar system In steep slopes, prepare half moon terraces to prevent soil erosion and leaching loss If there is physical damage, pruning of damage branches and application of Bordeaux paste should be done to prevent secondary infection Nutrient management to be done 	 Provide proper drainage Half moon terraces to be done to prevent nutrient loss Pruning of damaged branches and application of Bordeaux Paste to be done Nutrient management along with foliar application micronutrient to be done 	 Heavy pruning should not done as the fruit will be affected by rain Drain out excess water Maintain the plant using T-Bar trellis supporting system Nutrient management along with foliar application micronutrient to be done 	 Stored the fruits at 0 to 4°C and 80-90 % RH. Spray growth regulators Like Alar @ 1000 ppm to improve storability
Banana	 Provide proper drainage Nutrient management to be done Propping or staking should be done Spraying of insecticides and fungicide 	 Provide proper drainage Nutrient management to be done along with application of micronutrient Propping or staking should be done Spraying of insecticides and fungicide 	 Provide proper drainage Nutrient management to be done Propping to be done Bagging to be done to protect the bunch from unusual rains. Denavelling to be done to improve the bunch weight (removal of male bud) 	■ Store the fruits/ bunch in well aerated farm shed or house to avoid loses. ■ Storing at 10 – 12° C with 70 – 80 % RH
Large cardamom	 For newly planted crops, staking should be provided. Provide adequate drainage Spraying of insecticides and fungicid Follow proper nutrient management Earthing up to be done 	 Proper drainage system should be followed. Follow proper nutrient management Earthing up to prevent uprooting. 	 Harvest at physiological maturity stage or can be delayed Proper drainage system should be followed 	■ Collect the harvest and dry the produce in fuel kiln overnight at 50°-60°C or in drier for 14-18 hours at 45°-50°C
Ginger	 Provide proper drainage channels to avoid stagnation of water Earthing up to be done at proper soil moisture level Nutrient management to be followed Field bunding to prevent entry of water from surrounding areas. Spraying of insecticides and fungicide 	 Provision of drainage to remove excess water. Earthing up should be followed by manuring. Field bunding to prevent entry of water from surrounding areas. 	 Harvest at physiological maturity stage. 	 Shifting of the produce to a drier place. Drying to remove excess moisture of produce (moisture level 10%)

Turmeric	 Provide proper drainage channels to avoid stagnation of water Earthing up to be done at proper soil moisture level Nutrient management to be followed Field bunding to prevent entry of water from surrounding areas. Spraying of insecticides and fungicide 	 Provision of drainage to remove excess water. Earthing up should be followed by manuring. Field bunding to prevent entry of water from surrounding areas. 	 Dry weather before harvesting is necessary. So harvesting can be delayed. 	 Shifting of the produce to a drier place. Drying to remove excess moisture of produce.
Vegetables (cucurbits)	 Provision of drainage to remove excess water. Earthing up to be followed Ensure proper staking of crop wherever required Field bunding to prevent entry of water from surrounding areas. 	 Spray maleic Hydrazide @ 50ppm aqueous solution at 2 and 4 leaf stages to stimulate vine growth, giving more female flowers. Provision of drainage to remove excess water. Wind break around the orchard to protect crop from wind damage Earthing up and propping to prevent uprooting. Field bunding to prevent entry of water from surrounding areas. 	 Fruits to be harvested immediately without causing injury to fruits Remove all damaged fruit Take up appropriate plant protection measures 	■ The fruits can be stored for 2-3 weeks at 15-20°C and RH 75% in a well-ventilated chamber.
Outbreak of pests an	nd diseases due to unseasonal rains : NA			
Paddy (Blast)	 Use trap crops for prediction of disease. Removal and destruction of weed hosts in the field bunds and channels 	■ Spraying of Mancozeb @ 2g/lt or spraying of Carbendazim @ 1 g/lt.	 Drain out excess water to avoid flooded conditions. 	Sun drying to prevent spoliage and sprouting of the harvested grains.
Paddy (Brown Spot)	-Do-	-Do-	-Do-	-Do-
Paddy (Bacterial leaf blight)	■ Destruction of weed hosts.	 Spraying of streptomycin and tetracycline. 	 Drain out excess water to avoid flooded conditions. 	-Do-
Paddy (Yellow Stem Borer)	 Collection and destruction of egg masses. 	• Spraying of Chloropyriphos 20 EC @ 0.02 %.	■ Harvesting at the right stage.	-Do-
Paddy (Gall Midge)	Removal of alternate host plants including weeds and grasses and destruction of infected plants.	 Providing proper drainage system. 	■ Harvesting at the right stage.	-Do-
Maize (Stalk rot)	Removal of accumulated water around the stalks by proper drainage.	 Rouging of affected plant and its destruction. 	Spraying of streptocycline @ 0.020 %.	 Sun drying of the harvested cob to prevent spoilage.

Horticulture				
Orange (Citrus Leaf miner)	 Spraying of Fenvalerate and Cypermethrin for controlling leaf minor. 	 Spraying of Fenvalerate and Cypermethrin for controlling leaf minor. 	Harvesting at the right stage and proper handling of the produce.	• Store in cool place in crates, boxes etc
Orange (Citrus butterfly)	 Hand picking of caterpillars and pupae in the nursery. 	 Spraying of Neem formulation to control citrus butterly. 	Do	Store in cool place in crates, boxes etc
Orange (Powdery mildew in citrus)	 Spraying of wettablesulpher and carbendizim to control powdery mildews. 	■ Spraying of wettablesulpher, bavistin (0.1 %) and calixin (0.1 %).	 Spraying of wettablesulpher and carbendizim to control powdery mildews. 	• Store in cool place in crates, boxes etc.
Tomato	 Removal of accumulated water by proper drainage. Destroy the heavily infested/infected plant parts. 	Spraying of Sulfex @ 2 g/lt of water.	 Harvesting at the right stage and proper handling. 	Store in cool/dry place packed in crates, boxes etc.
Brinjal	 Removal of accumulated water by proper drainage. Destroy the heavily infested/infected plant parts. 	 Spraying of Sulfex @ 2 g/lt of water. Soil dranching with captan/Tiram @ 2/lt of water 	Harvesting at the right stage and proper handling of the produce.	Store in cool/dry place packed in crates, boxes etc.
Cabbage	 Removal of accumulated water by proper drainage. Destroy the badly infested/infected plant parts. 	 Spraying of Sulfex @ 2 g/lt of water. Soil dranching with captan/Tiram. @ 2/lt of water Streptocycline spray 	 Harvesting at the right stage and proper handling of the produce. 	• Store in cool/dry place
Cucurbits	 Manual collection & destruction of eggs/grubs/larvae. 	 Spraying of carbaryl against leaf eating caterpillars, Metalaxyl against Powdery mildew, Carbendazim against leaf spot & blight 	• Spraying of Malathion against fruit fly.	■ Store in cool/dry place
Large Cardamom	 Proper drainage. Uprooting and destruction of Chirke and Foorkey infected cardamom plants. 	Removal of affected plant from the field.	• Harvesting at the right stage and proper handling of the produce.	 Quick drying of harvested capsule.
Ginger (Soft rot)	Removal of accumulated water in the field by proper drainage.	Removal and destruction of affected plants.	■ Spraying with Blitox – 50 (3 g/lt) or Dithane – Z-78 (2.5 g / lt).	■ Store in cool/dry place

2.3 Floods

Condition	Suggested contingency measure			
Transient water logging/ partial inundation	Seedling / nursery stage	Vegetative stage	Reproductive stage	At harvest
Rice	■ Drainage of the Nursery bed.	■ Drainage of excess water.	■ Drainage of excess water. If	■ Drainage of excess water. If

Horticulture/Plantation	■ Re -sowing if not possible	 Gap filling In partially damaged field by redistributing the tillers. Management of pests & diseases 	flood comes during reproductive stage, emphasis should be given on forthcoming rabi crops. Utilization of residual soil moisture and use of recharged soil profile for growing pulses	flood comes during reproductive stage, emphasis should be given on forthcoming rabi crops. Utilization of residual soil moisture and use of recharged soil profile for growing pulses
crops				
Banana	 Provide proper drainage Nutrient management to be done Propping or staking should be done Spraying of insecticides and fungicide 	 Provide proper drainage Nutrient management to be done Propping or staking should be done Spraying of insecticides and fungicide 	 Provide proper drainage Nutrient management to be done Propping to be done 	 Store the fruits/ bunch in well aerated farm shed or house to avoid loses. Storing at 10 – 12° C with 70 – 80 % RH
Ginger	 Provide proper drainage channels to avoid stagnation of water Earthing up to be done at proper soil moisture level Nutrient management to be followed Field bunding to prevent entry of water from surrounding areas. Spraying of insecticides and fungicide 	 Provision of drainage to remove excess water. Earthing up should be followed by manuring. Field bunding to prevent entry of water from surrounding areas. Application of fungicide and insecticides 	Harvest at physiological maturity stage or can delay harvesting	Shifting of the produce to drier place.
Turmeric	 Provide proper drainage channels to avoid stagnation of water Earthing up to be done at proper soil moisture level Nutrient management to be followed Field bunding to prevent entry of water from surrounding areas. Spraying of insecticides and 	 Provision of drainage to remove excess water. Earthing up should be followed by manuring. Field bunding to prevent entry of water from surrounding areas. Application of fungicide and insecticides 	Harvest at physiological maturity stage or can delay harvesting	Shifting of the produce to drier place

	fungicide			
Vegetables (cucurbits)	 Proper drainage of the nursery bed, If not possible go for re–sowing. Raised bed method should be followed in the nursery. Earthing up to be followed Ensure proper staking of crop wherever required Field bunding to prevent entry of water from surrounding areas. 	 Proper drainage of the nursery bed, If not possible go for resowing. Earthing up to be followed Ensure proper staking of crop wherever required Field bunding to prevent entry of water from surrounding areas. Follow appropriate nutrient management practices 	■ Drainage of excess water. If flood comes during reproductive stage, emphasis should be given on forthcoming rabi crops ■ Growing of cole crops or winter vegetables after receding flood water and adoption of integrated farming system to obtain more income and to compensate the loss during kharif vegetables.	Shifting of the produce to drier place and store fruits in a well-ventilated chamber

2.5 Contingent strategies for Livestock, Poultry & Fisheries

2.5.1 Livestock

		Suggested contingency measures	
	Before the events	During the event	After the event
Drought			
Feed and fodder availability	identification of locally available, natural fodder of area.	resources. Grazing in the peri peri of forest areas. Feeding according to body weight requirement Improvement of the poor quality roughages	 Avail the benefits of schemes under drought, from state or central for feeds and fodder. Supplementary feeding of livestock to regain the general physiological imbalanced. Proper irrigation of fodder plot and cultivation of leguminous fodders to meet the demand of green fodders
Drinking water	structures.	 Use of stored water from water harvesting structure. Fetching water from watershed areas and natural stream/river. Avail subsidy water supply through tankers from sate or central Govt. 	 Submitting a memorandum to sate or central Govt. regarding amount of water shortfall during drought and action to be initiate accordingly. Construction of permanent water harvesting structure with a planning to fulfill the water requirement during drought.
Health and disease	■ Ensure livestock insurance	■ Mass awareness cum Health camp and	■ Mass awareness cum Health camp and

management	 Deworming to reduce worm load Stocking of veterinary medicines, vitamin and mineral supplements. Training of paravets and identifying key man in each village to combat the situation if arise. Regular radio/TV telecast to follow the instruction of Do & Don'ts from experts. Providing available communication and transportation facilities in every dispensary / clinic for consultations. Proper ventilation system of Housing to reduce heat stress. 	symptomatically prompt treatment accordingly. Supplementary feeding of vitamin and mineral to improve general body health.	symptomatically prompt treatment accordingly. selective culling of disease animal Submitting a memorandum to sate or central Govt. regarding the loss of animal due to Drought and remedies to be taken accordingly for future. Mini vaccine unit could be establish for covering a perimeter 30-50 km.
Floods			
Feed and fodder availability	through Agromet advisories. Awareness on fodder cultivation & identification of locally available, natural fodder of the area. Excess fodder may be stored as hay/silage or converted into feed block in the flush season, for lean period. Stacking of paddy straws. Installation of feed block machines and creating feed/fodder block banks to be used in emergency.	 Avoid feeding of damp feeds and fodders Storage of feeds and fodder in high raised platform. Use of unconventional feed/fodders resources (water hyacinth) Shifting of livestock to high raised areas. Use of feed additives to improve digestibility. Provision of UMB etc. Use of stored Hay and Silage 	 Submitting a reports, damage caused by flood to feed and standing fodder Supplementary feeding of livestock to regain the general physiological imbalanced. Proper irrigation of folder plot and cultivation of leguminous fodders to meet the demand of green fodders. Avail the benefits of schemes under flood, from state or central for feeds and fodder.
Drinking water	 Storage of safe drinking water in community tanks / water harvesting structures which is not prone to seepage of flood water. Installation of large sized sand filters with charcoal. Tying up with PHED Deptt. of neighboring district to supply water at needy time. Creating awareness amongst public how to conserve water and judiciously use in flood situation. 	 Chlorination of the drinking water and use of sand filter Incorporation of aquatic plants in feeds as a supplementary source of water If possible supply of fresh drinking water from nearby district. 	 Cleaning of water storage tanks, canals and drainage system. Cleaning and disinfection of water source with suitable water purifying agent, available in the area as per the recommended dose. Relief for damaged tanks and community pipe line for reconstruction. Avoid shallow source of water

Health and disease management	 Ensure livestock insurance Deworming to reduce worm load Vaccination of FMD, BQ and HS. Stocking of veterinary medicines, vitamin and mineral supplements. Training of paravets and identifying key man in each village to combat the situation if arise. Regular radio/TV telecast to follow the instruction of Do & Don'ts from experts. Providing available communication and transportation facilities in every dispensary / clinic for consultations. Construction of shelters in high raised areas. 	 Mass awareness cum Health camp and symptomatically prompt treatment accordingly. Supplementary feeding of vitamin and mineral to improve general body health. 	 Mass awareness cum Health camp and symptomatically prompt treatment accordingly. Immediate attention to the ailing animals. Sanitization of the shed and surrounding areas. selective culling of animal Submitting a memorandum to state or central Govt. regarding the loss of animal due to flood and remedies to be taken accordingly for future.
Cyclone	NA	NA	NA
Feed and fodder availability	 Advance early warning system through Agromet advisories. Proper storage of feeds and fodder in well constructed house Planting of trees as a wind break in farm area Excess fodder may be stored as hay/silage or converted into feed block in the flush season, for lean period. Stacking of paddy straws. 	 Animal should be confined in well construct house. Use of feed additives to improve digestibility. Provision of UMB etc. 	 Submitting a reports, damage caused by cyclone of standing fodder Avail the benefits of schemes under flood, from state or central for feeds and fodder.
Drinking water	 Advance early warning system through Agromet advisories for preparedness to combat the situation. Storage of safe drinking water in community tanks / water harvesting structures Creating awareness amongst public how to conserve water and judiciously use in flood situation. Tying up with PHED Deptt. of neighboring district to supply water at needy time. 	 Chlorination of the drinking water and use of sand filter Provide fresh potable water 	 Cleaning of water storage tanks, canals and drainage system. Cleaning and disinfection of water source with suitable water purifying agent, available in the area as per the recommended dose. Relief for damaged tanks and community pipe line for reconstruction. Avoid shallow source of water

Health and disease management	 Ensure livestock insurance Deworming to reduce worm load Stocking of veterinary medicines, vitamin and mineral supplements. Training of paravets and identifying key man in each village to combat the situation if arise. Regular radio/TV telecast to follow the instruction of Do & Don'ts from experts. Providing available communication and transportation facilities in every dispensary / clinic for consultations. 	 Mass awareness cum Health camp and symptomatically prompt treatment accordingly. Supplementary feeding of vitamin and mineral to improve general body health. selective culling of injured animal 	 Immediate attention to the ailing animals. selective culling of injured animal Mass awareness cum Health camp and symptomatically prompt treatment accordingly. Sanitization of the shed and surrounding areas. Submitting a memorandum to state or central Govt. regarding the loss of animal due to flood and remedies to be taken accordingly for future.
Heat wave			
Cattle			
Shelter/environment management	 Advance early warning system through Agromet advisories for preparedness to combat the situation. Good shelter with well ventilation and bedding materials Construction of shelters in wind shed areas. Increase the concentrate feed amount and reduce the roughage diet. Adlib provision of potable water 	 Confine the animal in protected shelter prevent them direct expose to heat wave reduce upto 20% of the ration provide nutretical Adlib provision of potable water Avoid movement of animal Sprinkling of water during the extreme heat to the animal Breeding should be done in morning hours. 	 Adlib provision of potable water Analysis of the present experience and remodeling of housing structure. provide nutretical
Health and disease management	 Advance early warning system through Agromet advisories for preparedness to combat the situation. Ensure livestock insurance Deworming and vaccination Stocking of veterinary medicines, vitamin and mineral supplements. Training of paravets and identifying key man in each village to combat the situation if arise. Regular radio/TV telecast to follow 	 Life saving treatment accordingly. Supplementary feeding of vitamin and mineral to improve general body health. Oral supplementation of electrolyte and medicines 	 Mass awareness cum Health camp and symptomatically prompt treatment accordingly. Immediate attention to the ailing animals. Sanitization of the shed and surrounding areas. Selective culling of animal Submitting a memorandum to state or central Govt. regarding the loss of animal due to cold wave and remedies to be taken accordingly for future.

Mithun	the instruction of Do & Don'ts from experts. Providing available communication and transportation facilities in every dispensary / clinic for consultations.		
Shelter/environment management		 Sprinkling of water during the extreme heat to the animal Breeding should be done in morning hours. 	 Adlib provision of potable water Analysis of the present experience and remodeling of housing structure. provide nutretical
Health and disease management	 Ensure livestock insurance Deworming to reduce worm load Stocking of veterinary medicines, vitamin and mineral supplements.
